New ThinPATH Portal Client version 1.2.7

Date: January 29, 2003
PMN: 114
Distribution: Worldwide
Author: Tim Kellogg

Overview

Available immediately, NCD has released the new ThinPATH Portal Client, version 1.2.7. This client runs on the ThinSTAR 500.NET and Legacy ThinSTAR terminals¹ and it is deployed to the terminals using the NCD ThinPATH Portal.

ThinPATH Portal Client 1.2.7 Enhancements

The ThinPATH Portal Client 1.2.7 changes the update process for the aforementioned terminals. Prior to version 1.2.7, when the Portal administrator performed a “Save Configuration” on the Portal, any terminal in any group that rebooted would have its properties and connection settings updated. This process created unnecessary updates for terminals in unrelated groups.

With Portal client version 1.2.7, terminals in a group will only be updated when a new reference terminal is designated for that group. This prevents unnecessary updates for terminals associated with other groups.

Download Information

We currently have two different versions of ThinPATH Portal available on our web site: version 3.1 and version 3.2.

The ThinPATH Portal version 3.2.1 upgrade module contains the Portal Client 1.2.7. This upgrade module is for ThinPATH Portal version 3.2.

A separate upgrade module for ThinPATH Portal 3.1 is called Portal Client 1.2.7.

Both upgrade modules may be obtained from the NCD download web site.

Additional Technical Information

Please see the release notes on the download page for additional technical information.

¹Legacy terminals include TS232, TS300, TS332, TS332WEB, TS400, TS450 and TS500.
