

New ThinSTAR 500.NET Operating Software

Date: January 29, 2003
PMN: 115
Distribution: Europe
Author: Tim Kellogg

Overview

Available immediately, NCD has released the new ThinSTAR 500.NET operating software, version 6.0.105. Version 6.0.105 replaces any of the earlier versions of operating software for the TS532.NET or TS564.NET terminals. This new software is deployed to the terminals using the NCD ThinPATH Portal.

ThinSTAR 500.NET Operating Software Enhancements

Version 6.0.105 operating software reduces the amount of memory allocated to the object-store-memory partition so as to allow multiple ICA sessions on the TS532.NET terminal. Prior to version 6.0.105, only one ICA session could be displayed on the TS532.NET at a time.

This release also contains the latest Citrix ICA client, version 6.3 build 1059, which improves the scrolling performance of the client.

Download Information

Prior to installing version 6.0.105 operating software on the terminal, the latest Portal Client, version 1.2.7, **must** be installed on the terminal.

Customers may download the ThinSTAR 500.NET version 6.0.105 software from the NCD web site.

Additional Technical Information

Please see the release notes on the download page for additional technical information.
